

# Alkatrésztoleranciák hatásának vizsgálata

Névleges alkatrészértékek és worst-case toleranciák:

$$R_1 = 10 \text{ k}\Omega \pm 1\%$$

$$R_2 = 10 \text{ k}\Omega \pm 1\%$$

$$C_1 = 1 \text{ nF} \pm 5\%$$

$$C_2 = 2 \text{ nF} \pm 5\%$$

Csomóponti egyenletek:

$$\frac{\varphi - U_{\text{be}}}{R_1} + \frac{\varphi - U_{\text{ki}}}{R_2} + \frac{\varphi - U_{\text{ki}}}{\frac{1}{j\omega C_1}} = 0$$

$$\frac{U_{\text{ki}} - \varphi}{R_2} + \frac{U_{\text{ki}} - 0}{\frac{1}{j\omega C_2}} = 0$$

A megoldás mátrixos alakban:

$$\begin{pmatrix} \varphi \\ U_{\text{ki}} \end{pmatrix} = \begin{pmatrix} \frac{1}{R_1} + \frac{1}{R_2} + j\omega C_1 & -\frac{1}{R_2} - j\omega C_1 \\ -\frac{1}{R_2} & \frac{1}{R_2} + j\omega C_2 \end{pmatrix}^{-1} \begin{pmatrix} \frac{U_{\text{be}}}{R_1} \\ 0 \end{pmatrix}$$
